Single Cell Sequencing Mini-Symposium

*Tickled by 10x? Surprised by Seurat?
Curious about combinatorial indexing?*

To gather together the nascent Otago single cell sequencing community, we would like to invite you to a mini-symposium. This will be an informal opportunity to talk about the growing variety of single cell sequencing approaches, to share tips and techniques, and for those new to these methods to learn how they could be applied to their research questions. A panel of speakers will be presenting examples of completed work, and their plans for the future. We also have space for more speakers!

Thursday 23 June 2022
1:00pm - 5:00pm

G13 Biochemistry Building
Zoom option available
